**PROJECT REPORT**

**Course:** Digital Literacy

**Student Name:** Akshad Nagare

**Reg No:** 25MEI10009

**Branch:** INT MTECH CSE(CYBERSECURITY)

---

## 1. Introduction

In the rapidly evolving landscape of the 21st century, digital literacy has transitioned from a supplementary skill to a core necessity for engineering professionals. As a student CSE specializing in **Artificial Intelligence and Machine Learning**, my digital footprint is my primary resume. This project, the "Student Digital Ambassador Program," was designed to bridge the gap between academic knowledge and professional digital presence.

The objective of this project was threefold: to establish a credible professional identity on global platforms, to master secure and effective communication, and to develop a deep understanding of the cybersecurity threats—such as UPI fraud and phishing—that target the modern digital ecosystem. By completing these five tasks, I have not only secured my personal digital environment but also prepared myself to lead and educate others in navigating the complexities of the digital world with ethics and efficiency.

---

## 2. Task-Wise Implementation

### Task 1: Digital Literacy Infographic

I created a comprehensive infographic focusing on the "5 Pillars of Digital Literacy." This visual guide serves as a roadmap for students to understand data privacy, critical thinking online, and digital tool proficiency.

- *Key Learning:* Visual communication is essential for simplifying complex security concepts for a general audience.

### Task 2: Professional Portfolio Setup

I established my presence on **GitHub, LinkedIn, and Kaggle**. For an AI/ML student, GitHub acts as my code repository, while Kaggle allows me to engage with real-world datasets and global data science competitions.

- *Outcome:* A synchronized digital identity that highlights my technical projects and professional networking.

**Task 3: Coding & Collaboration**

I successfully completed a Python challenge on **HackerRank** to validate my foundational programming skills. Additionally, I developed a **Digital Literacy Awareness Quiz** using Google Forms, integrated with Google Sheets for automated data collection and analysis.

- *Outcome:* Demonstrated proficiency in cloud-based data management and core programming logic.

**Task 4: Professional Communication**

I drafted professional emails for assignment extensions and internship inquiries, focusing on a tone that is respectful yet direct. I also compiled a "Social Media Do's and Don'ts" checklist to ensure my online behavior aligns with industry standards.

- *Key Phrase Used:* "Unanticipated logistical challenges" to maintain professional privacy.

**Task 5: Cybercrime Awareness**

I conducted a detailed case study on **UPI Payment Fraud** in India. I analyzed the psychological tactics used by scammers, such as creating false urgency to trick users into entering their UPI PINs.

- *Outcome:* Developed an 8-point prevention checklist and learned the importance of the **1930 National Helpline**.

---

**3. Conclusion**

The Student Digital Ambassador project has been a transformative experience in professional branding and digital safety. Through the systematic completion of these tasks, I have moved beyond being a mere consumer of technology to becoming a responsible digital citizen.

As an AI/ML student, I now recognize that technical expertise must be paired with strong ethical standards and clear communication. The platforms I have built—LinkedIn, GitHub, and Kaggle—will serve as the foundation for my career, while the security habits I have adopted will protect my digital assets. Ultimately, this project has equipped me with the "soft" and "hard" digital skills required to excel in a tech-driven global workforce.
